### Romcarbon Office- Design concept

Romcarbon S.A. started as a plastic bag producer that diversified into producing whole plant equipment for the plastic bag industry. The office space has an interior area of 470sqm and is situated in a 4 story office building, adjacent to the CARO Hotel in Northern Bucharest.

The design concept for Romcarbon office takes into consideration the idea of green, recycling and vegetation. This is manifested by using wood, glass and green plants. The palette colors are light green, gray while the glass is clear with a personalized Asian design.

The space is designed to accommodate 35 people and is beautifully divided between offices for managers, conference areas, CEO's office, protocol and the reception area. You enter the office directly into the reception area from where you are facing the real vegetation wall, a concept that is meant to welcome and relax the visitor. The ceiling is made out of metal strips and the floor is covered with mochette describing partially the same stripes.

December 2011 Issue

#### Our Services:

- Interior Design Consultancy,
- Design and Build,
- Feasibility and Strategic Space Studies,
- Project Management,
- Environment a Brand: Brand Application to Interiors,
- Sustainability Advisers, based on USGBC's LEED Accreditation

The Conference rooms are equipped with glass walls covered with a very light metallic structure, allowing the participants in the Conferences to write directly on these walls, and to use magnetic holding articles.

**The ACC (American Club in China–Taipei) PURE Fitness Centre**

Prior to the recent redesign of the ACC Fitness Center, it was an out-dated, tired, and unpleasant smelling fitness facility. Many steps have been taken to enhance the new ACC Fitness Center, which includes creating window openings on the Bei-An Park side of the Center for better ambient lighting and more aesthetic views. Synthetic flooring were installed to replace the carpet, which was a primary source of odors, improving access to the 2nd floor with the installation of a new elevator and isolating the aerobics floor to minimize the noise impact on other users of the Center. Better artificial lighting were also installed and further improvement on the overall layout, graphics, and color scheme of the Center.

However, the greatest improvement to the ACC PURE Fitness Center is actually unseen, but can be experienced by all Members of the ACC, who now enjoy the cleanest indoor air quality of any Fitness Center facility in Asia, or the rest of the world! Generally, people are becoming more aware of the importance and benefits of excellent Indoor Air Quality (IAQ) to our health, since we spend nearly 90% of our lives indoors.

The ACC PURE Fitness Center was achieved by the implementation of the following patented, 6-Step PURE Process developed in the USA, which bundles the best available indoor air technologies, resulting in a Fitness Center that is free of airborne allergens, mold, bacteria, viruses, and ultra-fine particulates.

The ACC PURE Fitness Center provides users with exceptional indoor air quality - as clean as it can be!
